

The energy transition not only needs visions – it needs committed doers to make it happen.

This is exactly our mission: Our business portfolio covers project development and construction as well as the optimized operation of wind and solar parks in Germany. In addition, we are a competent partner in the wind sector for tender procedures, repowering measures as well as operations and maintenance (O&M). We also install and operate tailored photovoltaic and energy storage solutions for commercial and industrial customers.

In cooperation with our customers and local players, we are thus making an active contribution to a successful implementation of the German energy transition: from the expansion of renewable energies and optimized plant operation to integrated battery storage systems for stabilizing the power grids.

EDF Renewables in Germany is a subsidiary of the international EDF Renewables Group. As one of the leading companies in the renewable energy sector, EDF Renewables is active in more than 20 countries.

#### Who we are looking for:

## Product Manager BESS (Battery Energy Storage Systems) (all genders)

#### About the Role:

We are seeking an experienced and highly motivated Product Manager BESS (all genders) to join our team in Berlin. You will work closely with the central purchasing and qualification team in Paris for core component supply. In this role, you will be responsible for overseeing the full product lifecycle of our Battery Energy Storage Systems, from supplier specification to commercial implementation and individual integration in our commercial and industrial (C&I) and grid scale applications.

#### Key Responsibilities:

- Define and manage the full product lifecycle of Battery Energy Storage Systems, including product specification, design and continuous improvement with the internal stakeholders and our key suppliers.
- Develop and maintain supplier specifications for key BESS components (Battery container, PCS, EMS, SCADA, etc), ensuring compliance with technical and market requirements.
- Lead C&I-specific product integration, optimizing the product interfaces for faster project execution in terms of standardization and simplification for the onsite installation.
- Collaborate with central purchasing to source and qualify main components, ensuring cost-efficiency and robustness.
- Provide technical sales & execution support, assisting in solution design, customer interactions, and technical documentation.
- Stay up to date with market trends, regulatory changes, and technological advancements in the BESS industry.
- Drive cross-functional collaboration during commercial, permitting, execution, construction, commissioning, and Operation phases to align product strategy with business goals.

#### Your skills and experience:

- Bachelor's or master's degree in engineering, Energy Technology, Business, or a related field.
- Proven experience in product management within the energy storage, renewable energy, or power electronics industry.
- Strong understanding of BESS technology, grid applications, and C&I solutions.
- Experience in supplier management, procurement processes, and quality assurance.
- Excellent analytical, organizational, and project management skills.
- Strong interpersonal and communication abilities.
- Fluency in English is required, good German, French proficiency is a plus.

**What we offer:**

- An innovative activity in the field of energy storage.
- A motivated and continuously expanding team with a common mission plus nice working environment situated in the center of Berlin is waiting for you. We have flexible home office rules.
- The opportunity to work on cutting-edge energy storage solutions.
- Professional training programs to enhance your skills.

If you want to drive forward the energy transition together with us, we should get to know each other. We look forward to receiving your convincing CV to the attention of:
